607 - Chess Tournament Project

Karim Hammoud

2020-09-22

Overview

In this project, you're given a text file with chess tournament results where the information has some structure. Your job is to create an R Markdown file that generates a .CSV file (that could for example be imported into a SQL database) with the following information for all of the players:

Player's Name, Player's State, Total Number of Points, Player's Pre-Rating, and Average Pre Chess Rating of Opponents

For the first player, the information would be:

Gary Hua, ON, 6.0, 1794, 1605

1605 was calculated by using the pre-tournament opponents' ratings of 1436, 1563, 1600, 1610, 1649, 1663, 1716, and dividing by the total number of games played.

The chess rating system (invented by a Minnesota statistician named Arpad Elo) has been used in many other contexts, including assessing relative strength of employment candidates by human resource departments.

Github link here

Rpubs link here

Import the required libraries

```
library(tidyverse)
library(openintro)
library(stringr)
```

Read the text file

```
url <- "https://raw.githubusercontent.com/akarimhammoud/CUNY-SPS/master/607-Data-Acquisition-and-Manage

tournamentinfo <- read.csv(paste0(url), header=F)
head (tournamentinfo)
```

```
##                                                                                          V1
## 1  -----------------------------------------------------------------------------------------

## 196 -----------------------------------------------------------------------------------------
```

Data wrangling

Taking out the first four rows

```
tournamentinfo <- tournamentinfo[-c(1:4),]
head(tournamentinfo)
```

```
## [1] "    1 | GARY HUA                        |6.0  |W  39|W  21|W  18|W  14|W   7|D  12|D   4|"
## [2] "   ON | 15445895 / R: 1794   ->1817     |N:2  |W    |B    |W    |B    |W    |B    |W    |"
## [3] "-----------------------------------------------------------------------------------------"
## [4] "    2 | DAKSHESH DARURI                 |6.0  |W  63|W  58|L   4|W  17|W  16|W  20|W   7|"
## [5] "   MI | 14598900 / R: 1553   ->1663     |N:2  |B    |W    |B    |W    |B    |W    |B    |"
## [6] "-----------------------------------------------------------------------------------------"
```

Checking the remaining rows

```
length(tournamentinfo)
```

```
## [1] 192
```

Pulling the first and second rows of each three rows.

```
first_row <- tournamentinfo[seq(1, length(tournamentinfo), 3)]
head(first_row,2)
```

```
## [1] "    1 | GARY HUA                        |6.0  |W  39|W  21|W  18|W  14|W   7|D  12|D   4|"
## [2] "    2 | DAKSHESH DARURI                 |6.0  |W  63|W  58|L   4|W  17|W  16|W  20|W   7|"
```

```
second_row <- tournamentinfo[seq(2, length(tournamentinfo), 3)]
head(second_row,2)
```

```
## [1] "   ON | 15445895 / R: 1794   ->1817     |N:2  |W    |B    |W    |B    |W    |B    |W    |"
## [2] "   MI | 14598900 / R: 1553   ->1663     |N:2  |B    |W    |B    |W    |B    |W    |B    |"
```

Using regular expression to extract the Data.

```
#pair number
number <- as.integer(str_extract(first_row,'\\d+'))
number
```

```
##  [1]  1  2  3  4  5  6  7  8  9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25
## [26] 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50
## [51] 51 52 53 54 55 56 57 58 59 60 61 62 63 64
```

```
#player's name
player_name <- str_trim(str_extract(first_row, '(\\w+\\s){2,3}'))
#player's state
player_state <- str_extract(second_row, "\\w+")
#points
player_points <- as.numeric(str_extract(first_row, '\\d+\\.\\d+'))
head(player_points)
```

```
## [1] 6.0 6.0 6.0 5.5 5.5 5.0
```

```
# the rating
player_rating <- as.integer(str_extract(str_extract(second_row, '[^\\d]\\d{3,4}[^\\d]'), '\\d+'))
head(player_rating)
```

```
## [1] 1794 1553 1384 1716 1655 1686
```

```
# the opponents
opponents <- str_extract_all(str_extract_all(first_row, "\\d+\\|"), "\\d+")
```

```
## Warning in stri_extract_all_regex(string, pattern, simplify = simplify, :
## argument is not an atomic vector; coercing
```

```
head(opponents)
```

```
## [[1]]
## [1] "39" "21" "18" "14" "7"  "12" "4"

```

```
#count the result
won <- str_count(first_row,'\\Q|W \\E')
lost <- str_count(first_row, '\\Q|L, \\E')
draw <- str_count(first_row, '\\Q|D \\E')
```

Calculate the mean rating

```
mean_rating <- length(first_row)

for (i in 1:length(first_row)) {
  mean_rating[i] <- round(mean(player_rating[as.numeric(unlist(opponents[number[i]]))]), digits = 0)
}
```

The final data frame

```
final_data <- data.frame(player_name, player_state, player_points, player_rating, mean_rating)
head(final_data)
```

```
##           player_name player_state player_points player_rating mean_rating
## 1            GARY HUA           ON           6.0          1794        1605
